Contents

Introduction

Cryptocurrency markets are currently so saturated with different coins, which are now a whole lot that it is difficult to keep track of what happens to each coin individually. Currently, there are more than 2,300 coins on the Coinmarketcap website alone. Cryptocurrency traders invest a lot of time and effort in interpreting the charts of various coins, spend a lot of time studying various cryptocurrency forums, reading Twitter and collecting information about coins from other sources in an attempt to predict market trends and make profitable trades. Cryptocurrency markets are volatile, which makes the task of predicting the rate of a crypto asset even more difficult.

Various forms of misinformation (for example, the spread of fud-fear or uncertainty), or even just false promises from the developers of various coins often stop traders from seeking profits in the cryptocurrency markets.

Problematics

Most beginners who open trading accounts on cryptocurrency exchanges and start independent trading, see only one goal - to earn as quickly as possible. This is a big mistake. The fact is that trading on the stock exchange will only become truly profitable when it becomes a priority for the person who came to trading. As a rule, to combine trade with any other occupation and at the same time everywhere to succeed will not work.

Trading for a novice trader should be if not the main, then a very important and priority occupation. No need to wait for quick results.

Trading on the stock exchange — the same profession as a doctor, Builder or engineer. The only difference is that she can't go to University. Just as one learns to be a Builder for five years, so it takes years to learn all the wisdom and secrets of the trade. Trading on the stock exchange is not a Stayer distance, it is a marathon. And the winner is the one who will find the courage to reach the end.

In addition, trade is very much changing a person, showing his qualities, which in everyday life he does not know. Over time, if a trader really wants to succeed in trading, he must completely rethink his life, change the system of values and look at many things, change himself.

Earlier, our team published a study in which we highlighted the basic mistakes of a novice trader and discussed some aspects of how to avoid big mistakes when trading on cryptocurrency exchanges. To learn more about our research you can link:

altcoin-magazine/trading-psychology-and-the-benefits-of-trading-bots

The main factors influencing the behavior of a beginner and often even an experienced trader in the cryptocurrency market are:

- Fear (as a Component of Trading);
- Emotions in Trading;
- Confidence in your own intuition;
- Confidence in their own abilities (self-confidence);
- Fear of Taking Responsibility;

As you understand, we mean COMMON psychological factors. However, these are not all reasons, but in reality, they are much more and if you approach this issue more carefully, you need to study each person/trader individually, because the individuality of each person has a place to be.

A person needs to realize that the cause of everything that happens to him is himself.

It is this view that allows you to succeed in life and in any business. And trade is no exception.

This is the way successful traders look at life. Once you realize that the cause of all your losses is yourself, and not some mythical manipulators, then the case will move forward.

Ways to solve problems in trading

There are several ways to solve problems in trading from simple to more complex and riskier.

Recently, in the Internet environment, there are many **financial and analytical companies offering trading services**. Conditions for trading services in such companies are simple: you pay them a certain amount of money, make a deposit to your account, and they promise you in return to increase your capital. Sounds simple? Of course! But if you have extra money, when choosing such a company, we advise you to carefully study their portfolio to avoid mistakes associated with the fact that after paying a certain amount you will not get anything in return. This is due to the fact that in an actively developing cryptocurrency market, a huge number of scammers have appeared who are ready to promise you anything for their own enrichment.

But if you do not find a fraudulent organization, each of them in the terms of the contract with you stipulates some nuances, by virtue of which such companies DO NOT GIVE 100% GUARANTEES. In short, you still take certain risks.

Another way to get information on trading strategy is through different **groups/channels in social networks**. You can pay for a subscription with different conditions and receive **signals** about what cryptocurrency and at what time to buy, and then at what time to sell it and get your profit.

This method is less dangerous than the way in which you hire trading specialists because any signal can be analyzed independently in advance, looking at the price chart of such a coin, look for and study the latest news and decide for yourself whether to buy this coin or wait for another signal. However, in such services more and more often there are scammers, so this method of trading is also a risky activity.

Also, there are **trading schools (offline/online)**. This method is considered less dangerous if such courses or seminars are taught by an experienced and professional trader. But for your risks to be justified, it is necessary to make sure the professionalism of the teachers. This requires that they confirm their experience with both their portfolio and confirmation through an official document. However, do not forget that the cryptocurrency market is constantly changing and constantly need to change the trading strategy. Therefore, when a trading teacher teaches you in such schools, he still does not use all the knowledge, because, as we just said, the "rules of the game" in the market are constantly changing and the strategy is changing.

Based on these methods, we can conclude that none of them guarantees you success as a successful player in the cryptocurrency market. Obviously, the best and most effective way is to explore and understand both trading and the cryptocurrency market on your own.

Trading bot/robot: introduction

In the age of digital technologies, when artificial intelligence develops, computer technologies improve, mankind creates various tools to facilitate their own life and everyday life.

If we pay attention to trading, then this direction is actively developing, getting new and unique tools. Since any trader (beginner or experienced specialist) is subject to emotions and various psychological factors, there are tools such as trading bots.

A trading robot (bot) is a program that has a certain algorithm. It buys or sells cryptocurrency assets, focusing on the situation in the market. The first trading robots appeared in 2012, and since then they have become more and more perfect. Currently, according to some estimates, 90% of short-term transactions are made either by bots or with their participation.

Bots are usually developed for specific trading platforms. Most cryptocurrency exchanges have an API, and they are generally positive about free auto trading within their platform.

In contrast to the positive attitude to exchange robots, exchanges often have a negative attitude to arbitration robots. On the rules of trade can be found in the official documentation of the exchange, and if there is no such information, the question can be asked directly to technical support. Some people wonder: is it possible to write your bot trader? This is not an easy option, which is suitable only for experienced programmers. After writing, bots are tested for a long time in the market, corrected numerous errors, corrected strategy.

A programmer can also write a bot based on someone else's code. Some bots are open source, and anyone can find it on **GitHub** and modify it to fit their needs.

Buy a bot for trading cryptocurrency: there are inexpensive programs for trading (about **$ 10**), and the cost of more high-quality and complex exceeds more than **$ 200** and even **$ 1000**. There is no maximum price limit for bots, top bots are written to order **$ 1500** and more.

Users are usually offered a choice of several tariff plans for crypto bots, from economy to luxury. The inexpensive option includes the most basic trading algorithms, and the expensive one brings maximum profit and works on more complex algorithms. Arbitration bots are more expensive exchange. Known cases when downloading the bot, people got on your computer virus-miner or virus-cipher, which encrypt all your personal files and demanded a ransom in bitcoin, usually in bitcoin. Naturally, after transferring the ransom to the specified wallet, no decryption of the files occurred.

Trading strategy of stock and arbitrage bots can be very simple, for example:
- When the price of cryptocurrency decreases, you need to buy it.
- If the price rises, it should be sold.
- Or much more complicated. The algorithm can take into account historical data for the last time, indicators, navigate by signals. Quality bots analyze more than a hundred parameters when placing orders.

Some programs do not change the algorithm, and there are bots that can connect or configure additional parameters. This option is well suited for experienced traders who have their own preferences in the style of trading.

A standard bot can perform such actions:
- To assess the market situation, to monitor the rate at a given period of time, to make a forecast. In manual trading, it can show signals to the trader.
- Create buy or sell orders.
- To report on the profit or loss received.

How does Metronix work?

Metronix is made for professionals but easy to use so even beginners can work with it.
Let's take a deeper look into the market to see how Metronix work.

We see above the daily chart of BTC/USD. During the day we have several ups and downs and Metronix using this.

Now let's start a Bot with this Values:

Exchange	IMBA		
Market	BTC		
Coin	USDT		
Amount	100		
Lot	1	Start	10200,00
Amountsize	100,00	Coinsize	0,01
Step	50		

This means the Bot will open 1 trade with Amount 100 in a step of 50 USD.

Market	Time	Type	Amount ava.	Amount	Price	Round
BTC_USDT	16.08.2019 19:31	buy	99,9	0,009794118	10200,00	1

Will this trade closed we open a sell position with 10250.
If this sell position closed we will open again the buy position with 10200 and start with round 2.
But this is only on example with one order. You can also open the bot with a loot of x depend on your amount you want to trade.

Market	Time	Type	Amount ava.	Amount	Price	Round
BTC_USDT	16.08.2019 19:31	buy	99,9	0,009794118	10200,00	1
BTC_USDT	16.08.2019 19:31	buy	99,9	0,009842365	10150	1
BTC_USDT	16.08.2019 19:31	buy	99,9	0,009891089	10100	1
BTC_USDT	16.08.2019 19:31	buy	99,9	0,009940299	10050	1
BTC_USDT	16.08.2019 19:31	buy	99,9	0,009990000	10000	1
BTC_USDT	16.08.2019 19:31	buy	99,9	0,010040201	9950	1
BTC_USDT	16.08.2019 19:31	buy	99,9	0,010090909	9900	1
BTC_USDT	16.08.2019 19:31	buy	99,9	0,010142132	9850	1
BTC_USDT	16.08.2019 19:31	buy	99,9	0,010193878	9800	1
BTC_USDT	16.08.2019 19:31	buy	99,9	0,010246154	9750	1
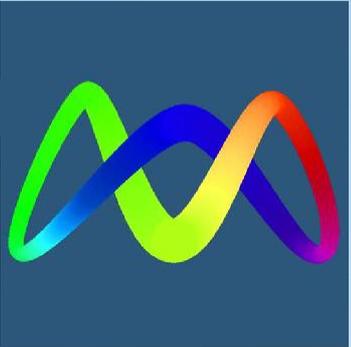

Metronix Token (MEOX)

Metronix Token (MEOX) is a TRC10 token created on the well-known in the crypto community the **TRON Blockchain**.

TRON is one of the largest blockchain-based operating systems in the world.

High-Throughput
High throughput is achieved by improving the TPS in TRON, which has surpassed Bitcoin and Ethereum, to a daily-use practical degree.

High-Scalability
Applications are given a wider variety of ways to be deployed in TRON because of its scalability and highly effective smart contract. It can support enormous numbers of users.

High-Availability
More reliable network structure, user asset, intrinsic value and a higher degree of decentralization consensus come with an improved rewards distribution mechanism.

Specifications:
1. Name: Metronix Token
2. Ticker: MEOX
3. Blockchain: TRON blockchain, TRC10 Standart
4. Emissions - 21 million tokens

Supported wallets:
TRON Wallet supports TRX, MEOX and other tokens on TRON's mainnet. The client supports multiple platforms:
- Web-wallet;
- Android (Google Play and Android APK);
- IOS;
- Chrome Extension (Chrome Web Store).

You can choose to download. Link for selecting and loading a wallet: **https://www.tronlink.org**

Referral program

You can use your referral link, which is in your personal account on IMBA-Exchange.

With each referral, you get additional bonuses in the form of income.

You can check the number of your referrals in your personal account Metronix bot. We pay referral commission in 3 Level. The Bonus you get always in MEOX once a day.

1. Level
40%

2. Level
10%

| 3. Level |
|:---:|
| **5%** |
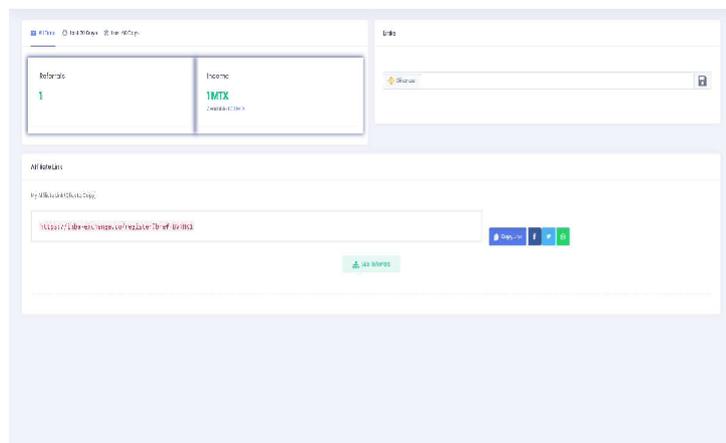

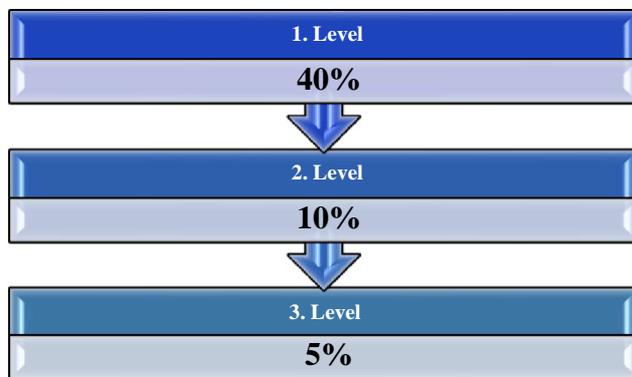

Metronix Marketplace

Metronix is made for specialists but as easy as it may be to work with beginners.

In the marketplace, our traders have the opportunity to share their bots with the community. By clicking on the bot, every customer can take the bot into their portfolio.

Every Trader will receive a bonus for sharing his bot every time when someone copy it. Also, the user will have a possibility for a donation if they want to say thank you.
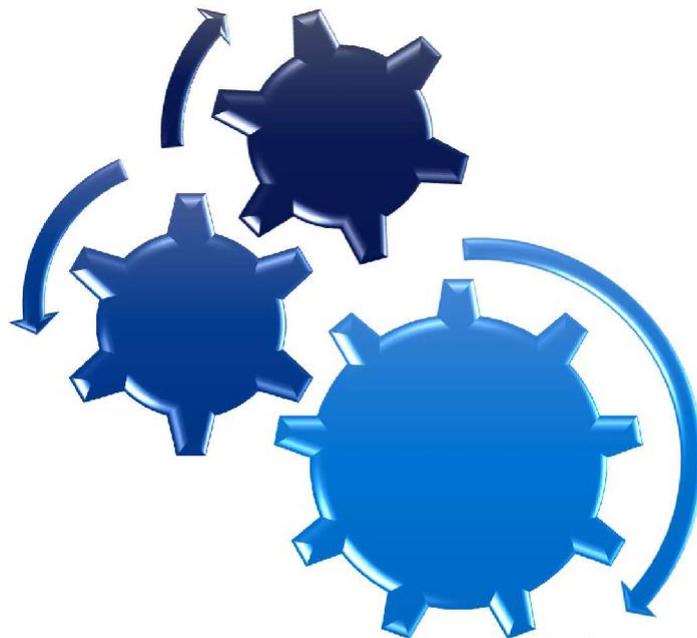

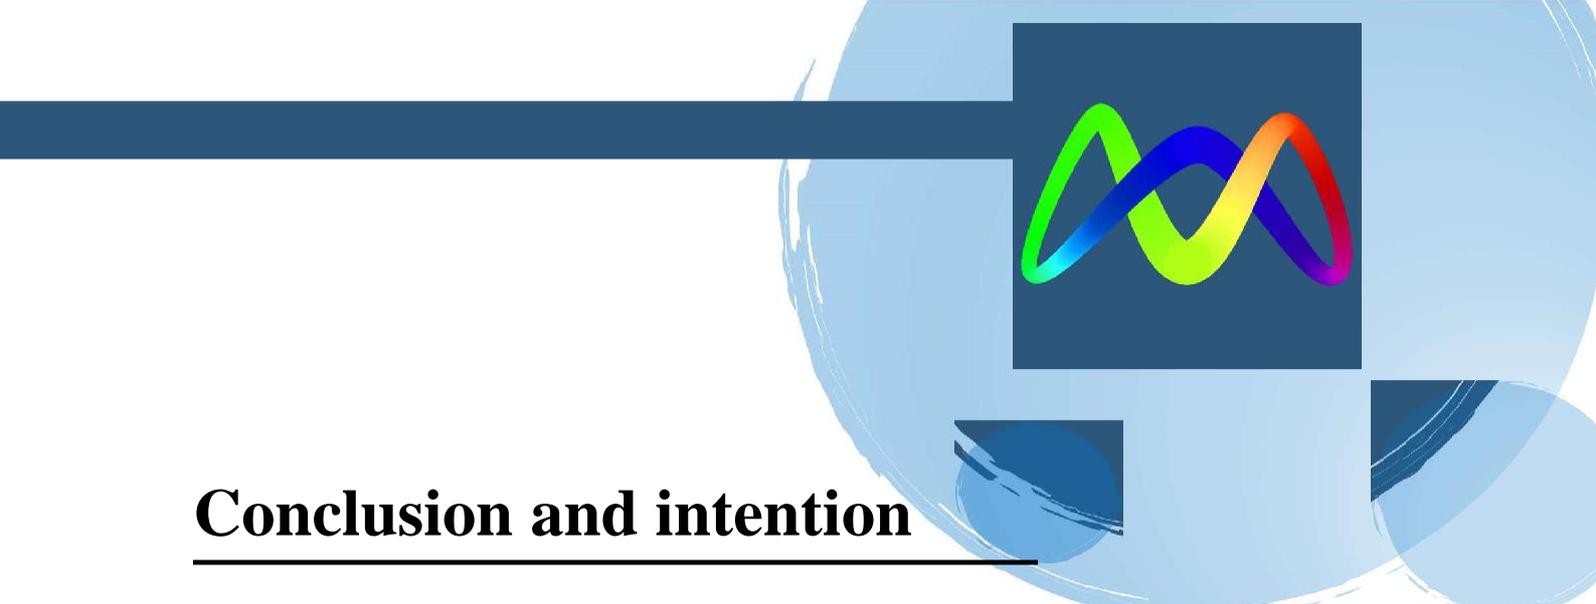

Conclusion and intention

Ing. Michael Eder the CEO of IMBA-Exchange, who has 10 years of experience in trading and the last 3 years in cryptocurrency trading, has firmly decided for himself that in the current realities trading on the exchange simply needs bots:

*Throughout the time that I have been trading, I can confidently say that today trading bots are necessary for all traders as the main tool. No matter how long you are in exchange trading, but the nature of the person is designed so that under the influence of psychological factors, market conditions, etc. You still make mistakes and, as a result, this leads to financial losses. Our **Metronix Trading Bot** will help to solve these problems and eliminate negative consequences. A bot is a tool; it has no feelings. He performs a specific task for a given program and performs it almost unmistakably. The task of the trader is to monitor the situation on the market and correctly, as well as at the right time to configure your bot.*
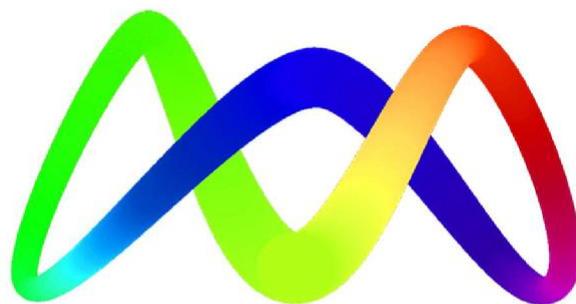

"Designed for beginners made for specialists"
